## Hosting an Eclipse plugin update site

The first step is to create the local version of the update site. For example, chapter 18, section 3 of "Eclipse Plug-ins, 3rd edition" will explain how to do this. Tip: do not attempt to put the update site in the code repository. The plugin and feature files are treated like binaries and bad things will happen. Here is a sample update site for the mango plugin.

Now you will re-create this directory structure within the wiki. Chose a home direction, say HOME. For the mango plugin,

HOME=<http://babelfish.arc.nasa.gov/trac/jpf/wiki/projects/jpf-mango>

Whatever choice of HOME you make, the update site you advertise to the world will be HOME/update.
