## Download Binary Snapshots

Available binary snapshots are attached as \*.zip archives to their respective [JPF module pages](#). Just click the on the download link and tell your browser where to store them on disk, which you need to remember for your subsequent [site.properties configuration](#). We recommend putting all JPF modules under a single parent directory that holds the [site.properties file](#):

```
jpf/  
  site.properties  
  jpf-core/  
  jpf-symbc/  
  ...
```

Many JPF modules are still fast moving, so we recommend using the source repositories to stay up-to-date. Our policy is to only push changes to this server which pass all regression tests
