

Mango paper for JPF Workshop 2011

This paper, attached below, is rather technical. It gives an overview of some mathematical ideas at the foundation, and a road map for how those ideas are implemented in the code base and exported to the Eclipse gui. More examples will be forthcoming as the plugin settles down. There is no point releasing the plugin just yet, but a stable version should be ready in a few months (February or March 2012). To download the paper, just click on the attachment inside the attachments expander and then click on "downloading".
