How to customize specification generation with shadow rules

See for example the shadow rules for `ItsAWrap`, `AxiomInLoop` and `FindNegative` in `rbk/testCode`. After loading one of these projects, build the specification for the corresponding class. In the `MangoExplorer` model of the `MangoHome`, navigate inside `store/shadows/` to the relevant content. In this context, it is helpful to review the role of shadow rules in the [ItsAWrap example](#). Not much more to say here because this topic [needs work](#).
